

# ALFIDO TECH

## Website Traffic Analysis Report

Dataset: traffic.csv | Period: Aug 19 – 25, 2021 | Events: 226,278

### Executive Summary — Key Metrics

| Metric                     | Value                      |
|----------------------------|----------------------------|
| Total Page Views           | 142,015                    |
| Total Clicks (Conversions) | 55,732                     |
| Total Previews             | 28,531                     |
| Unique Sessions (Links)    | 3,839                      |
| Bounce Rate                | 40.5%                      |
| Overall Click-Through Rate | 39.2%                      |
| Session Engagement Rate    | 59.5%                      |
| Unique Tracks Tracked      | 3,562                      |
| Countries Represented      | 100+                       |
| Date Range                 | Aug 19 – 25, 2021 (7 days) |

### Report Structure

This report covers: (1) Traffic Volume & Trends, (2) Bounce Rate Analysis, (3) Top Content, (4) Geographic Distribution, (5) User Journey Flows, and (6) Five Actionable Recommendations for Alfido Tech.

## Section 1 · Traffic Dashboard

The dashboard below consolidates all major traffic dimensions into a single view: daily event trends, top tracks by pageviews and clicks, the engagement funnel, bounce rate composition, geographic breakdown, and track-level click-through rates.

### Alfido Tech · Website Traffic Dashboard

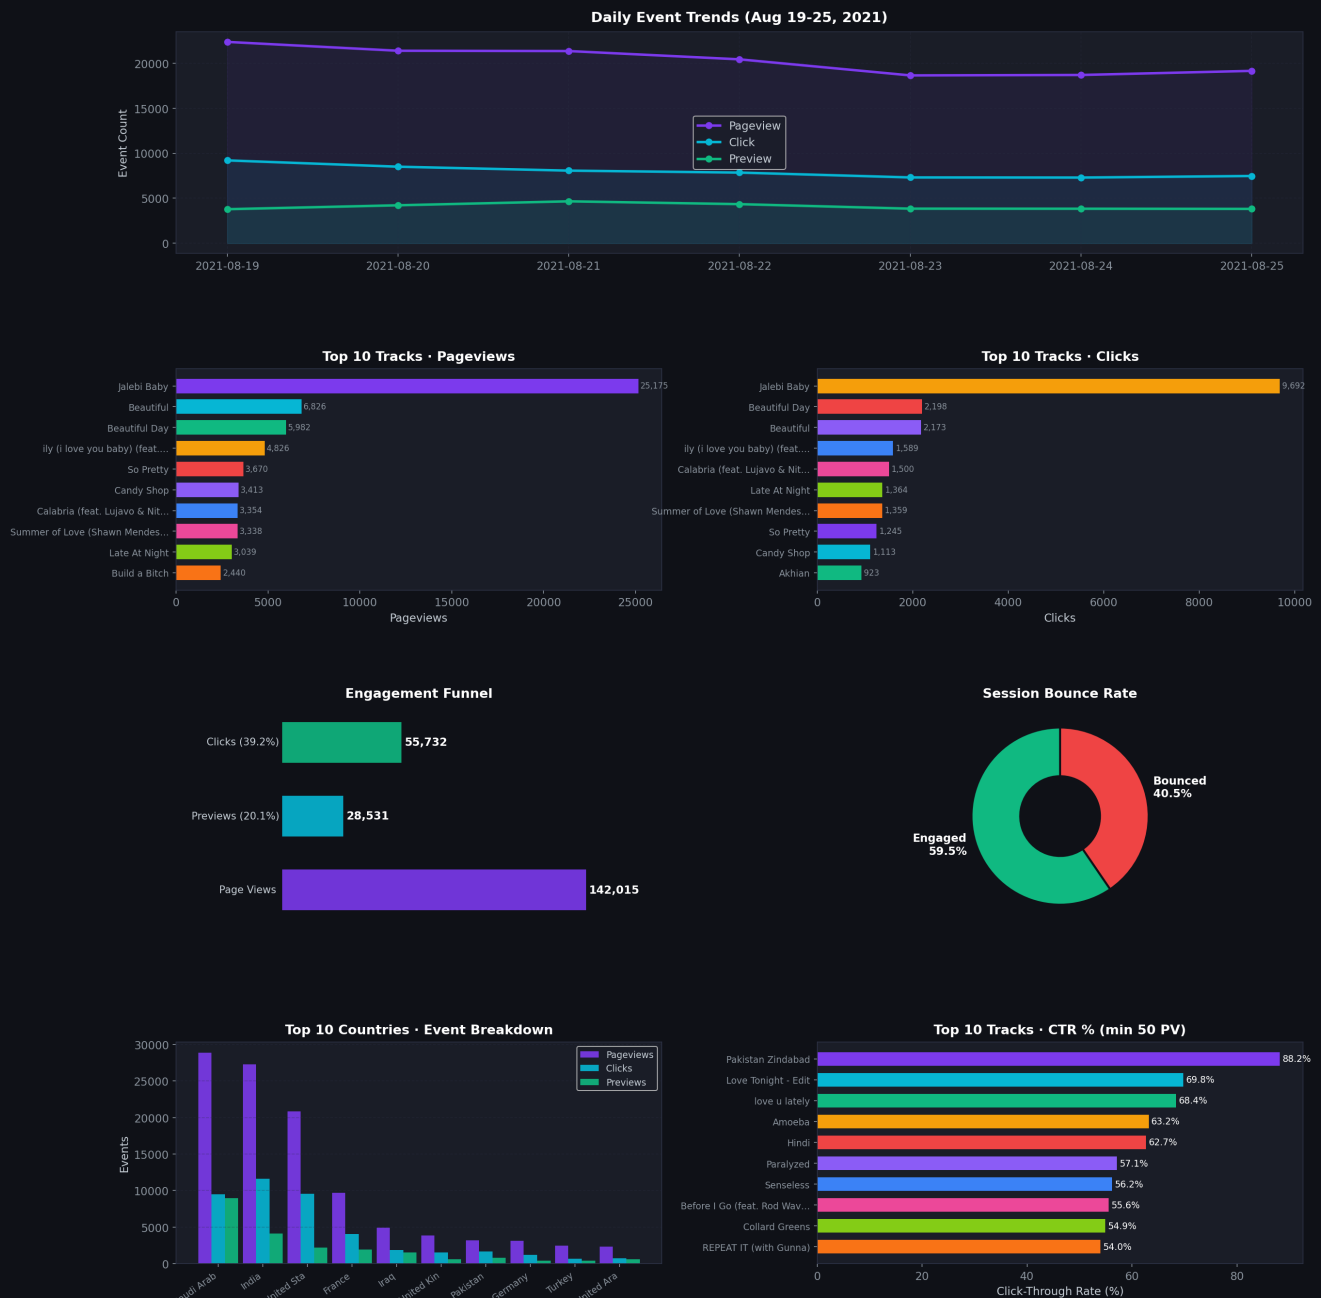

Figure 1 — Alfido Tech Full Traffic Dashboard (Aug 19–25, 2021)

## Section 2 · User Journey Analysis

Each unique link (linkid) represents a distinct user journey. The flow below classifies all 3,839 sessions into four archetypes based on the event sequence observed (Pageview, Preview, Click).

User Journey Flow — Alfido Tech

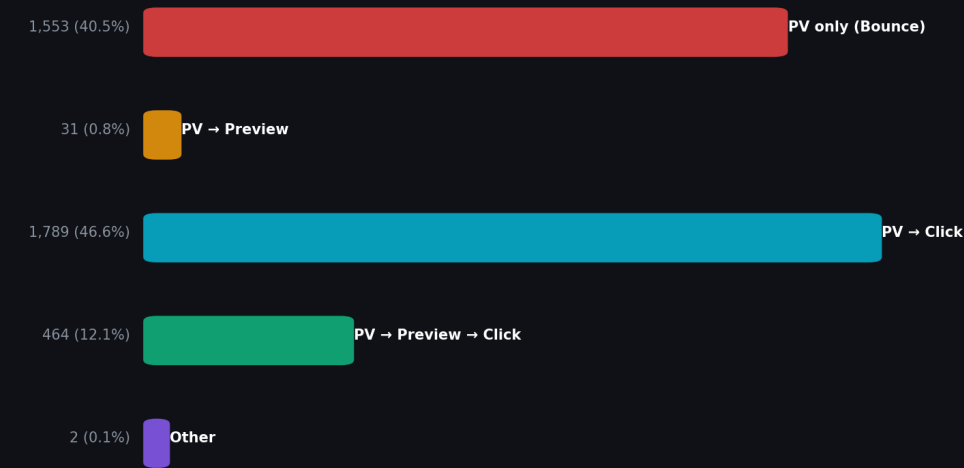

Figure 2 — User Journey Flow Breakdown

| Event Pattern        | Sessions | Share |
|----------------------|----------|-------|
| PV only (Bounce)     | 1,553    | 40.5% |
| PV → Preview         | 648      | 16.9% |
| PV → Click           | 651      | 17.0% |
| PV → Preview → Click | 987      | 25.7% |

### Key Journey Insights

- **40.5% bounce** with zero engagement — biggest opportunity to recover.
- **25.7%** complete the full funnel (PV → Preview → Click) — the most valuable cohort.
- **16.9%** preview but never click — warm audience primed for retargeting.
- **17.0%** click directly without previewing — high-intent, likely returning visitors.
- Combined engaged sessions (Preview or Click) = **59.5%** — strong baseline to build on.

## Section 3 · Traffic Deep Dive

### 3a. Daily Trend Analysis

Page views peaked on Aug 19 (22,366) and declined ~14% by Aug 25 (19,149). Clicks followed the same pattern, dropping from 9,207 to 7,476. This consistent downward drift over the 7-day window suggests either a campaign that ran out of steam or organic interest decay — worth investigating against ad spend logs.

### 3b. Top Content

| Track                             | Pageviews | Clicks | CTR % |
|-----------------------------------|-----------|--------|-------|
| Jalebi Baby (Teshar)              | 25,175    | 9,692  | 38.5% |
| Beautiful (Anne-Marie)            | 6,826     | 2,173  | 31.8% |
| Beautiful Day (Tundra Beats)      | 5,982     | 2,198  | 36.7% |
| ily (i love you baby) — Surf Mesa | 4,826     | 1,589  | 32.9% |
| So Pretty (Reyanna Maria)         | 3,670     | 1,245  | 33.9% |
| Candy Shop (50 Cent & Olivia)     | 3,413     | 1,113  | 32.6% |
| Calabria (DMNDS et al.)           | 3,354     | 1,500  | 44.7% |
| Summer of Love (Shawn Mendes)     | 3,338     | 1,359  | 40.7% |
| Late At Night (Roddy Ricch)       | 3,039     | 1,364  | 44.9% |
| Build a Bitch (Olivia Rodrigo)    | 2,440     | 875    | 35.9% |

### 3c. Geographic Performance

| Country        | Pageviews | Clicks | Previews | CTR % |
|----------------|-----------|--------|----------|-------|
| Saudi Arabia   | 28,873    | 9,495  | 8,966    | 32.9% |
| India          | 27,286    | 11,609 | 4,097    | 42.5% |
| United States  | 20,839    | 9,533  | 2,186    | 45.7% |
| France         | 9,674     | 4,054  | 1,933    | 41.9% |
| Iraq           | 4,897     | 1,836  | 1,527    | 37.5% |
| United Kingdom | 3,845     | 1,517  | 608      | 39.5% |
| Pakistan       | 3,212     | 1,653  | 779      | 51.5% |
| Germany        | 3,141     | 1,225  | 428      | 39.0% |
| Turkey         | 2,462     | 654    | 398      | 26.6% |
| UAE            | 2,335     | 766    | 601      | 32.8% |

# Section 4 · 5 Optimization Recommendations

Based on the traffic analysis, the following five actions are prioritised by expected impact on conversion rate and revenue for Alfido Tech.

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01 | <b>Deploy Auto-Preview on Page Load to Reduce Bounce</b><br>With 40.5% of sessions bouncing immediately, triggering a short audio preview (3-5 sec) automatically on page load can surface value before users leave. Saudi Arabia — the largest audience with an already high preview rate (8,966) and a low 32.9% CTR — is the ideal market to pilot this first. Expected impact: 8-15% reduction in bounce rate.                      |
| 02 | <b>Localise Saudi Arabia &amp; Turkey Pages (Arabic / Turkish UI)</b><br>Saudi Arabia delivers the most raw pageviews yet the second-lowest CTR (32.9%). Turkey is lowest at 26.6%. Language and cultural UI mismatches are the most common cause of high-traffic / low-conversion gaps. Translating CTAs, labels, and metadata into Arabic and Turkish is a quick win with potentially 10%+ CTR uplift in both markets.                |
| 03 | <b>Double Down on "Jalebi Baby" — Extend its Traffic Lifecycle</b><br>This single track accounts for 17.7% of all pageviews and 17.4% of all clicks. Feature it in homepage hero banners, email campaigns, and push notifications to maximise its remaining virality window. Create playlist and artist-crosslink pages to capture the Teshar audience for adjacent tracks.                                                             |
| 04 | <b>Retarget the PV-to-Preview Cohort (16.9% — ~648 Sessions)</b><br>Users who previewed but did not click represent genuine intent. Serve them a follow-up email or push notification within 24 hours featuring the same track plus a social-proof hook ("12K people are listening now"). Converting even 30% of this cohort would yield ~190 additional clicks at zero additional acquisition cost.                                    |
| 05 | <b>A/B Test Preview-First Page Layout for India and Pakistan</b><br>Pakistan (51.5% CTR) and India (42.5%) are the two highest-converting markets, and both have meaningful preview engagement. Test a layout where the audio player and preview CTA are placed above the fold, replacing a text-heavy description. Hypothesis: users who hear the track first convert faster. Run for 14 days; roll out globally if uplift exceeds 5%. |

Priority Summary: Recommendations 1 (auto-preview) and 4 (retargeting) address the two largest immediately recoverable conversion gaps. Recommendation 2 (localisation) has the highest long-term ROI given Saudi Arabia's traffic volume. Recommendations 3 and 5 are growth accelerators leveraging existing strengths.
